

GymTracker — Getting Started

A quick introduction to the everyday tasks in GymTracker. This guide is written for trainers; client-only notes are called out where they differ.

Logging in

- 1 Go to the app and you'll land on the **Sign in** page.
- 2 Enter your **Email** and **Password**.
- 3 Click **Sign in** (or press Enter).

If your details are wrong you'll see *"Invalid email or password."* Once signed in you land on the **Home** page, which has a sidebar (Home, Workouts, Clients, Trainers, Progress, Exercises) and quick-action cards.

To log out, use **Sign out** at the bottom of the sidebar.

Changing a password

Trainers/admins only (for now). Password changes are handled by a trainer or admin. Clients do not currently have access to change their own password — this may be added for clients in the future.

- 1 Open **Users** (the user list) from the sidebar.
- 2 Click the **pencil / edit** icon next to the person.
- 3 In the **Edit Client / Edit Trainer** dialog, fill in **New Password (leave blank to keep current)**.
- 4 Save.

Leaving the field blank keeps the existing password unchanged.

Creating a client

Trainers and admins can add clients.

- 1 Go to **Clients** and click **Add User** (top right) — or use the **New User** quick-action card on Home.
- 2 In the **Add New User** dialog, fill in:
 - **Name**
 - **Email**
 - **Password**
 - **Role** — choose **Client** (also available: Trainer, Admin)
- 3 Click **Create User**.

When opened from the Clients page, the role defaults to **Client**.

Creating a workout

Trainers create workouts for clients.

- 1 Go to **Workouts** and click **New Workout** (top right) — or use the **New Workout** quick-action card on Home.
- 2 In the **Start New Workout** dialog, fill in:
 - **Client** (required)
 - **Trainer** (optional)
 - **Date** (defaults to today)
 - **Copy from previous workout** (optional — see Creating a follow-up workout). Leave on **Start fresh** for a blank workout.
- 3 Click **Start Workout**.

You're taken to the workout page, ready to add exercises.

Adding sets and exercises

A workout is organized into **Sets** (Set 1, Set 2, ...), and each set contains one or more **exercises**, and each exercise has one or more **rounds**.

Add a set

Click **Add Set** at the bottom of the workout. A new numbered set appears.

Add an exercise to a set

- 1 Click **Add Exercise** inside the set card.
- 2 In the **Add Exercise** dialog, start typing in "**Type to search exercises...**" and pick from the matches.
 - If it doesn't exist, click **Create "<name>" as new exercise**, fill in **Name** (and optionally **Category**, **Primary Muscle**, **Equipment**), and click **Create Exercise**.
- 3 Set the targets for the exercise:
 - **Modifier** (optional notes, e.g. *"start at 10, slow tempo"*)
 - **Rounds** (default 3)
 - **Target Reps**
 - **Weight (lbs)**
 - **Duration (s)** — for timed/hold exercises
 - If the client has personal bests for this exercise, you'll see them here and a flag if your targets would beat a PB.
- 4 Click **Add to Set**. One row is created per round.

Add another round

Click **Add Round** under an exercise to add a round; it inherits the previous round's targets.

Logging results and using the check marks

During the session, each round row has fields to record what actually happened:

- **Reps** — actual reps performed
- **Weight** — actual weight used
- **Note** — anything worth recording
- A **check button** to mark the round **complete**

Click the **check** to mark a round complete (the button fills in; click again to mark it incomplete).
Completing a round saves the row and checks for a new **personal best** — if hit, you'll get a "New personal best — <exercise>! 🟩" toast.

Clients can log results (reps, weight, notes, check marks) on **their own** workouts.
Adding/removing sets, exercises, and rounds is trainer-only.

Completing a workout

When the session is done, click **Complete Workout** (top right of the workout page).

- The status changes to **Completed** (shown as a green badge).
- Editing and logging are locked.
- A **Reopen Workout** button appears if you need to make changes — click it to set the workout back to in-progress.

Creating a follow-up workout (next session)

When it's time for the next session, create a new workout one of two ways:

Copy from a previous workout

- 1 Start a **New Workout** and select the **Client**.
- 2 Open **Copy from previous workout** and choose a past (completed) session — each is listed as date – exercise, exercise,
- 3 Click **Start Workout**.

The new workout copies the full structure and **targets** (sets, exercises, rounds, target reps/weight/duration) but **not** the previous actual results — so you start fresh on logging while keeping the plan.

From scratch

- 1 Start a **New Workout** and select the **Client**.
- 2 Leave **Copy from previous workout** on **Start fresh**.
- 3 Click **Start Workout**, then add sets and exercises manually.

That's the core loop: log in → create/select a client → create a workout (fresh or copied) → add sets, exercises, and rounds → log results and check off rounds → complete the workout.
